

## Model# VAC WIRING DIAGRAM FOR ONE ZONE SWITCH

Install and wire up an optional REMOTE ONE ZONE switch to the UZC, NCM, or BMPlus series Control panels. Turn the switch on to instantly setback/override control of the entire zoned system. All zone dampers will respond to Zone #1 thermostat only. The integrated red LED will illuminate on the white switch plate with black lettering to indicate that ONE ZONE MODE is active. All other zone thermostats will be ignored until the switch is turned off. Ideal for vacations, long weekends, or whenever the home is unoccupied for long intervals. Mount the switch close to the zone #1 thermostat for remote activation of the ONE ZONE MODE. Includes a plastic 2x4 junction box.
